*ProMax is the only complete front end solution for your dealership, offering award-winning automotive software with integrated vehicle recall functionality.*

Access open vehicle recall data with the click of a button

Better evaluate trades, book inventory, and funnel customers to your service lane. Our comprehensive database gives you and your customer valuable information on any open recalls a vehicle has.

Easy to use and fully integrated into ProMax

RecallMasters

Any time you enter a trade, that VIN is automatically checked for any open recalls. If there are none, a green "No Open Recalls" button will display. If there are open recalls, a red button will display, e.g. "2 Open Recalls". Clicking this button will launch a Vehicle Recall Information button in your browser with the full details, plus Print and Email options.

Recall checks on the Trade Screen happen automatically, but it's also available on the Inventory and Desking screens. On these screens it will initially appear as a gray button labelled "Check For Recalls". Once a particular VIN has been checked from any screen, it will display either green or red throughout ProMax. There's also an option to print a Recall Disclosure form on sold vehicles, whether they have an open recall or not.
